BruhnBruhn Innovation

To Whom It May Concern,

Abhay Mishra completed a summer internship as a Junior Software Developer at BruhnBruhn Innovation AB from 2026-06-15 to 2026-08-07.

During the internship, he worked on an Earth observation demonstration application running on Dacreo, our Kubernetes-compatible cloud-native software platform for deploying and operating applications in space. His tasks included updating the application's YOLO-based object detection model, adding a new object class for vehicle detection, and integrating two of our existing components, Healthdog (heartbeat-based health reporting) and Space Manager (state-based application supervision), into the application. He also produced technical documentation covering parts of the application's architecture and the changes made during the internship.

Throughout the internship, Abhay demonstrated a positive attitude, curiosity, and an eagerness to learn about software development, machine learning, and satellite software infrastructure.

We wish him all the best in his continued studies and future career.

Sincerely,

Linnéa Soto Carlsson
Customer Success Engineer
BruhnBruhn Innovation AB

Henrik Hindbeck
Senior Software Developer
BruhnBruhn Innovation AB
